**Demos**

# Context

The event management industry faces constant challenges.

Develop an integrated management system for the events:  
Participants info, medical info, entry and exit system, etc ...

Capable of handling large volumes of audiences in an organized way.

# State of The Art

				
Access Management	✓	✓	✓	✓
Balance Management	✓	✗	✗	✓
Payment Methods (QR Code)	✓	✗	✗	✓
Roles Management	✓	✓	✓	✓
Purchase Products via QR Codes	✓	✗	✓	✓
Account Loading for Cashless Transactions	✓	✗	✗	✓
Medical Attention Management	✗	✗	✗	✓

# Our modular system

## Medical Center

With pre-filled medical files to better attend **emergency** situations.

## Events

Access and Kiosks logistics common to all this kind of events.

## Theme

The theme of the event can be changed to **meet** the client **expectations** (i.e Scouts Event)

# Goals

# Goals

01

5

Improved Participant  
Experience

6

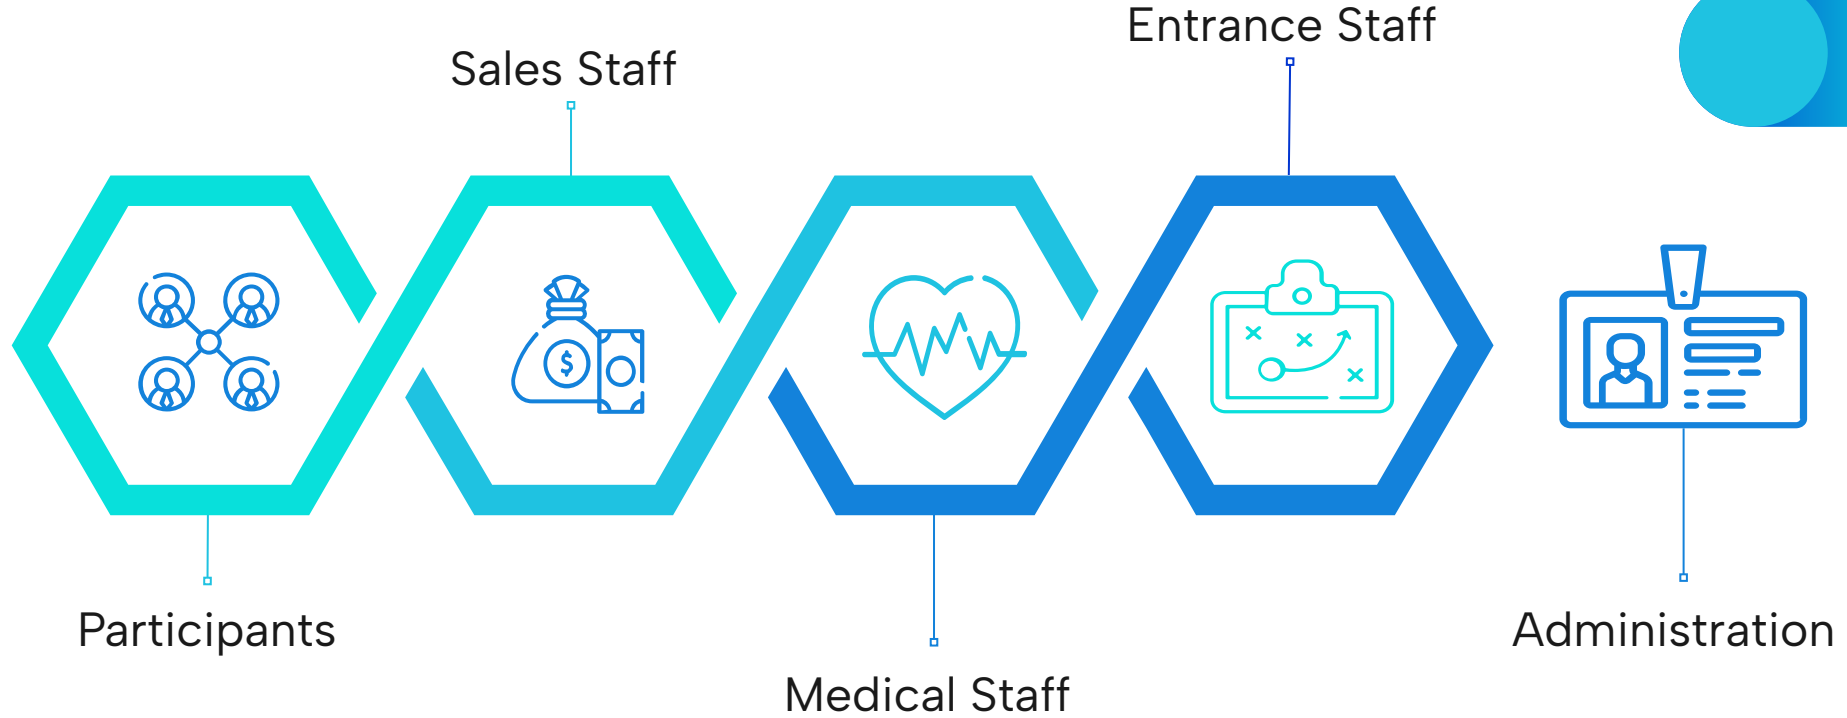

Strengthening Safety  
and Health

7

Data Analysis and  
Reports

# Actors

# Functional Requirements

## Participants

- Access personal data
- Enter and leave the premises
- Add money to their accounts

## Medical Staff

- Access medical information
- Create treatment files
- Access treatment files history

## Administration

- Allow registration of participants
- Update product stock
- See the event participants flow

- Registration of sales
- Allow money to be load into participants accounts

## Sales Staff

- Record entries of the participants
- Record exits of the participants

## Entrance Staff

## 01

# Non-functional Requirements

## Functionality

The system should be able to read QRcodes/NFCcodes.

The system should allow the use of more than one browser.

## Performance

The system should handle large volumes of audiences (data capacity).

After a money top-up/load, the money must be available in the participants' account in less than 5 seconds (throughput).

The system should warn the responsible chiefs in less than 3 seconds whenever a child on their charge entries in the medical center (response time).

## Security

Only medical and administration staff can have access to the medical center area.

Only medical and administration staff can have access to the participants health information.

Only sales staff can make a sale or exchange.

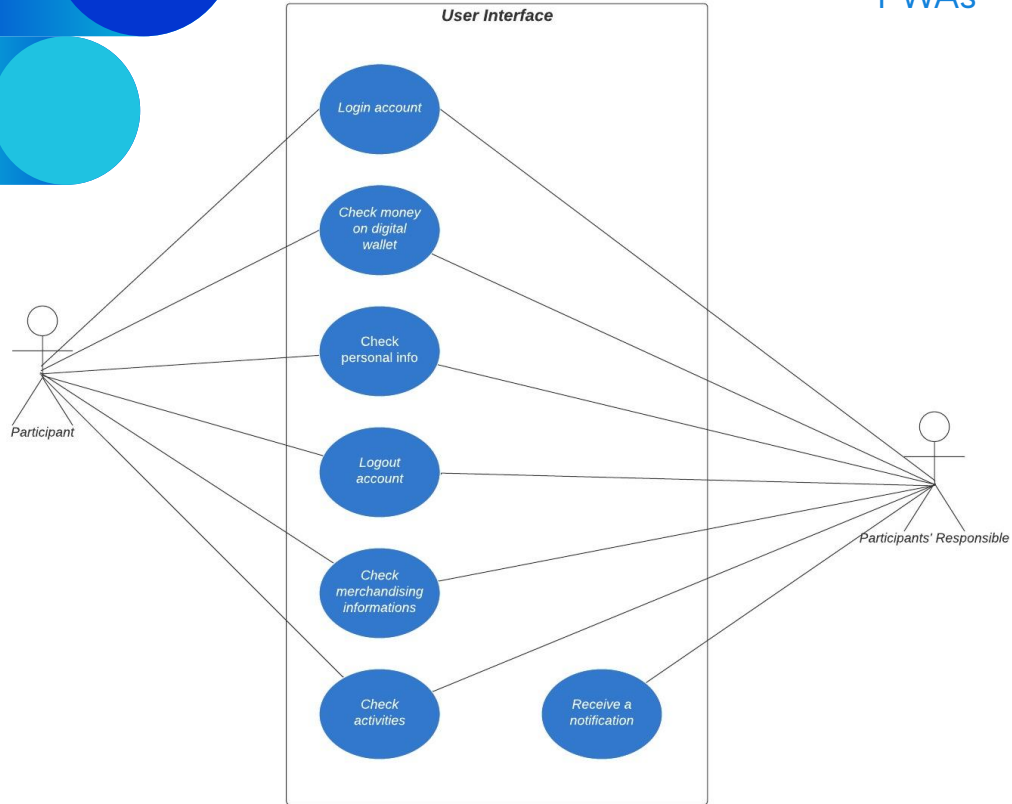

## Availability

All the interfaces (except the kiosk) should be available 24/7, this including during the night.

If the system crashes, the data should not be lost.

# Challenges

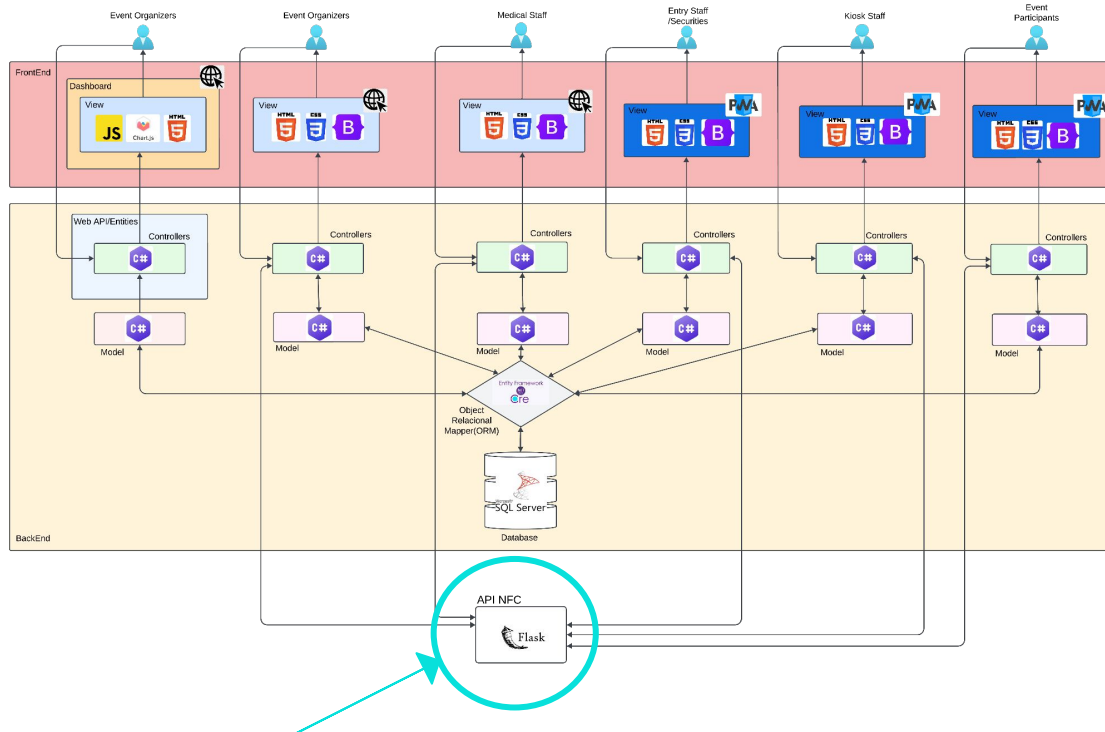

03

## NFC Integration

New API development

**GET: /api/nfc/read**

# Challenges

## PDF Generation

For treatment files download, in case a participant needs to head to the hospital

## DB Changes

Throughout the development process we improved our DB

## Space for images

The images identifying the participants need space to be stored.  
A big number of participants is expected.

# Future Work

## Frontend

Improve the frontend according to usability tests

## Usability Tests

Scouts will test our system so we can improve some frontend features

## Integration and Unit Testing

Tests to the functioning of our project

## Dashboard Graphs

Graphs with information about the kiosks status, for example

# Future Work

## QR Codes Reading

Reading of the QR Codes, as an alternative to the NFC bracelets

## Notifications

Notifications for those **Responsible** for the participants

## Images outside DB

The images should not be kept directly in the DB
